Workshops**

Question? Contact linda1@uic.edu

This workshop provides training for recognizing and understanding implicit bias.

Workshop presentation, interactive exercises, and discussions will enable participants to apply evidence-based strategies to reduce the impact of implicit bias in the context of their workplace. Participants will gain knowledge of how to break their own bias habits, and how to help interrupt bias processes and reduce bias primes in their workplace environments.

The Breaking the Bias Habit® workshop will:

- Describe the effects of implicit (unconscious) bias
- Identify common forms of bias that operate in academic medicine
- Provide evidence-based strategies for reducing bias in your work environment
